## Summary

AI Engineer and Data Science student experienced in building end-to-end ML pipelines, deploying RESTful model services, and producing data-driven insights. Strong foundation in NLP, deep learning, and software engineering practices. Focused on practical, testable solutions and reproducible workflows. Seeking a junior AI/ML role to contribute to production systems and grow engineering rigor.

## Education

**KPR Institute of Engineering and Technology**

*B.Tech — Artificial Intelligence & Data Science — CGPA: 8.4/10*

**Coimbatore, India**

*Sep 2023 – Sep 2027*

## Technical Skills

**Languages:** Python, C++, SQL, JavaScript

**ML & AI:** TensorFlow, PyTorch, scikit-learn, NLP, Transformers, Computer Vision

**Data & Visualization:** Pandas, NumPy, Matplotlib, Seaborn, Plotly, Tableau

**Engineering:** FastAPI, Streamlit, Docker, Git, REST APIs, CI basics

**Cloud & DBs:** AWS (Certified), GCP basics, MySQL, MongoDB

**Languages:** English, Hindi, Nepali

## Professional Experience

**AI/ML Engineering Intern**

**Jan 2025 – Feb 2025**

*Flourage Technology (Remote)*

- Developed and deployed three ML-backed prototypes using Python, FastAPI, and Streamlit; focused on reproducibility and automated preprocessing.
- Refactored backend preprocessing and serialization logic to reduce latency variability and simplify integration with model inference.
- Implemented modular training pipelines enabling reproducible experiments and faster iteration across model variants.
- Created interactive analytics dashboards (Plotly, Tableau) used by product and engineering partners for feature prioritization.

## Selected Projects

**Twin Travel — AI Travel Recommendation Engine** | Python, TensorFlow, NLP, FastAPI

**2024**

- Engineered a hybrid recommenders stack combining collaborative filtering and content-based ranking; integrated review sentiment as a relevance signal.
- Built data ingestion and feature pipelines to standardize heterogeneous destination metadata and user preferences.
- Deployed model inference endpoints with FastAPI and added caching to improve response stability under test load.

**Job Recommendation & Resume Matching** | Python, BERT, NLP, Streamlit

**2024**

- Implemented resume–job semantic matching using BERT embeddings combined with TF–IDF features and cosine similarity ranking.
- Extracted structured skills from resumes and built a simple gap-analysis module to recommend learning paths.
- Delivered a Streamlit prototype for rapid user testing and iteration.

**Career Path Recommender** | Python, Web Scraping, Tableau

**2024**

- Aggregated job-market signals from multiple portals to compute trending skills and role growth trajectories.
- Trained models that map user skill profiles to probable transition pathways and visualized results in Tableau dashboards.

**Multilingual AI Chatbot** | Python, Transformers, FastAPI, Docker

**2024**

- Built an intent classification and entity-recognition pipeline with multilingual transformers; integrated translation layer for fallback cases.
- Packaged services with Docker for consistent testing and evaluation across environments.

**Churn Prediction & Explainability** | Python, XGBoost, SHAP

**2024**

- Constructed churn prediction models using tree-based ensembles and validated performance using cross-validation and AUC metrics.
- Applied SHAP to surface key feature attributions for business-facing explanations and retention planning.

## Certifications

**Deep Learning Specialization** — deeplearning.ai

**Google Data Analytics Professional Certificate** — Coursera

**AWS Certified Cloud Practitioner** — Amazon Web Services

**Additional coursework:** TensorFlow for AI, Python for Data Science
